D3 Data Bind

D3 Data Bind

```
d3.select("svg").selectAll("rect")
   .data([12, 23, 42, 18, 7])
```

- Data values are bound to DOM elements

- An update, enter, *and* exit selection is returned

D3 Data Bind

```
d3.select("svg").selectAll("rect")
   .data([12, 23, 42, 18, 7])
```

- Data values are bound to DOM elements

- An update, enter, *and* exit selection is returned

D3 Data Bind

```
d3.select("svg").selectAll("rect")
   .data([12, 23, 42, 18, 7])
```

- Data values are bound to DOM elements

- An update, enter, *and* exit selection is returned

Data Bind Matching Game

DATA

12

23

42

18

DOM Elements

Update, Enter, Exit Selections

- **Matched data/DOM elements --> Update selection**

- **DOM elements that don't find matches --> Exit selection**

- **"Placeholder" non-existent DOM elements for data that don't find matches --> Enter selection**

Number of elements (after data bind)?

UPDATE **ENTER** **EXIT**

After data bind

Number of elements:

UPDATE	ENTER	EXIT
0	5	0

D3 Data Bind

```
d3.select("svg").selectAll("rect")
   .data([12, 23, 42, 18, 7])
```

- Data values are bound to DOM elements
- An update, enter, *and* exit selection is returned

How do we access selections?

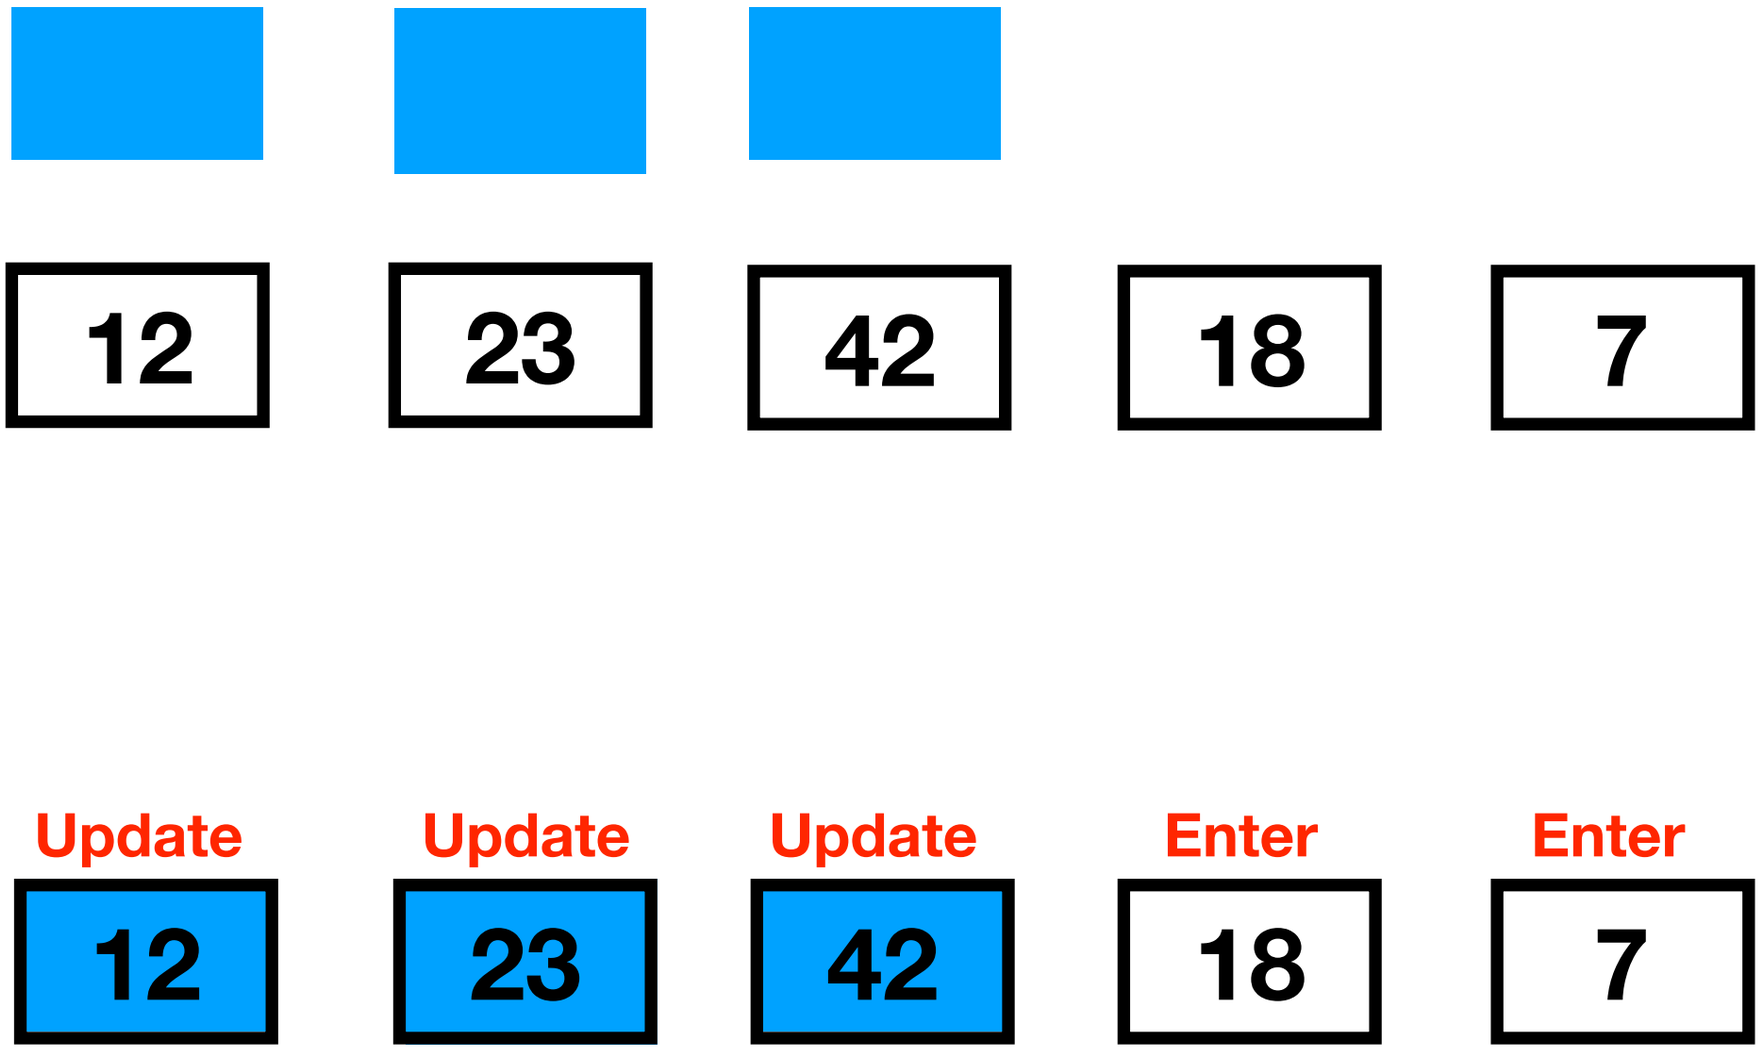
Accessing selections

Update: *selection*.***data***([*data*])

Enter: *selection*.***enter***()

Exit: *selection*.***exit***([*data*])

Scenario 1:
More data than DOM elements



Update, enter, exit selections

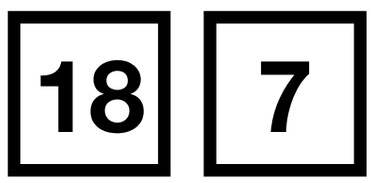
```
var svg = d3.select("svg");

svg.selectAll("rect")
    .data([12, 23, 42, 18, 7]);
```

UPDATE

```
svg.selectAll("rect")
    .data([12, 23, 42, 18, 7])
    .enter();
```

ENTER



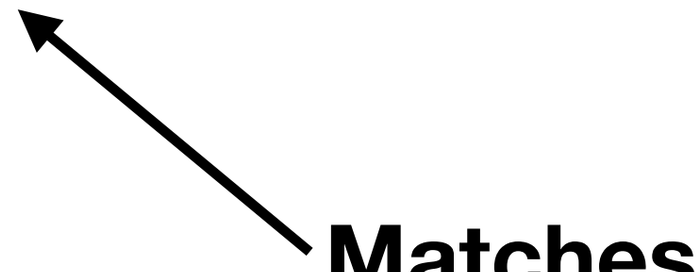
```
svg.selectAll("rect")
    .data([12, 23, 42, 18, 7])
    .exit();
```

EXIT

∅

Update selection

```
> svg.selectAll("rect").data([12, 23, 42, 18, 7]);
<· ▼ ut {_groups: Array(1), _parents: Array(1), _en
     ter: Array(1), _exit: Array(1)} i
     ▶ _enter: [Array(5)]
     ▶ _exit: [Array(3)]
     ▼ _groups: Array(1)
       ▶ 0: (5) [rect, rect, rect, empty × 2]
         length: 1
       ▶ __proto__: Array(0)
     ▶ _parents: [svg]
     ▶ __proto__: Object
```



Enter selection

```
> svg.selectAll("rect")
      .data([12, 23, 42, 18, 7])
      .enter();
```

```
◀ ▼ut {_groups: Array(1), _parents: Array(1)}
    ▼ _groups: Array(1)
    ▶ 0: (5) [empty × 3, U, U]
      length: 1
```

Placeholders

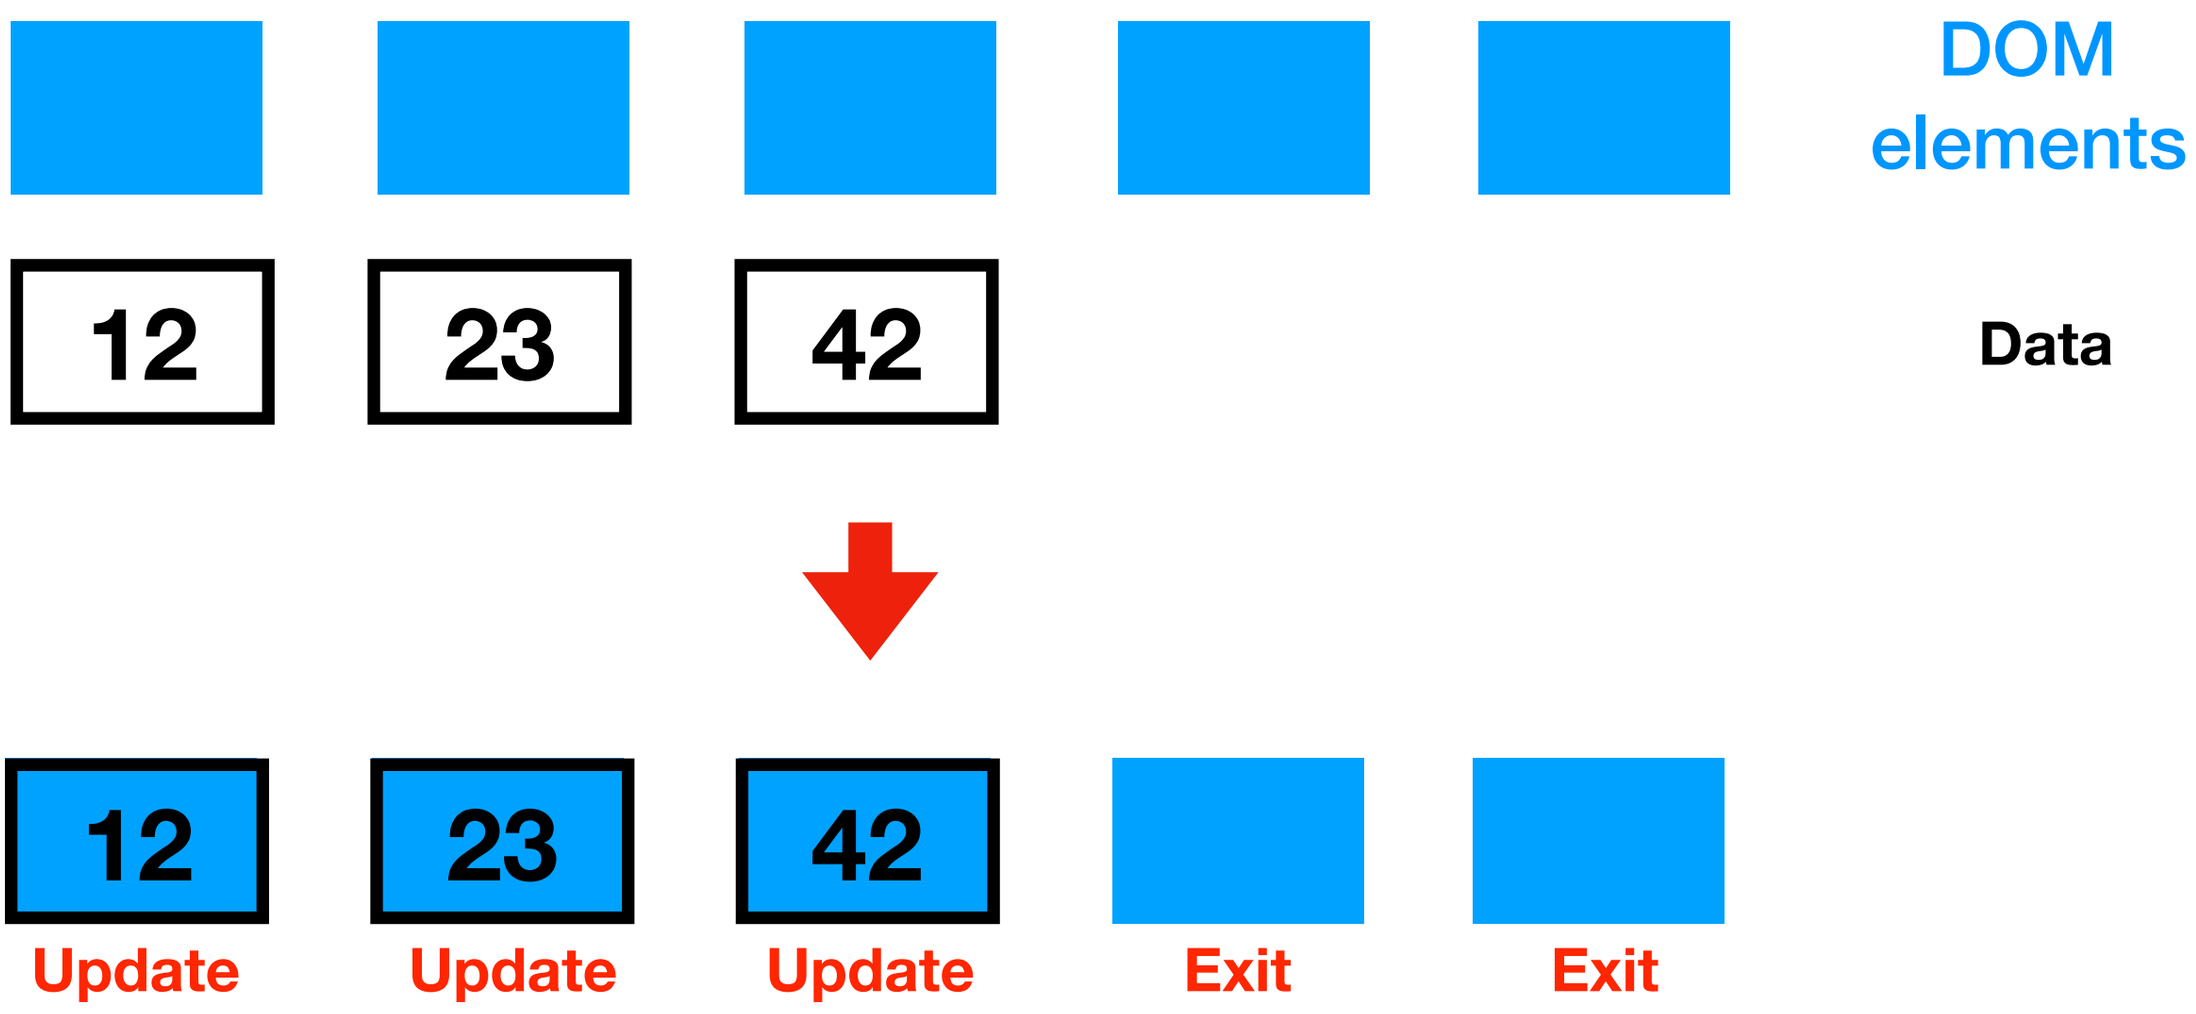
Exit selection

```
> svg.selectAll("rect")
      .data([12, 23, 42, 18, 7])
      .exit();
```

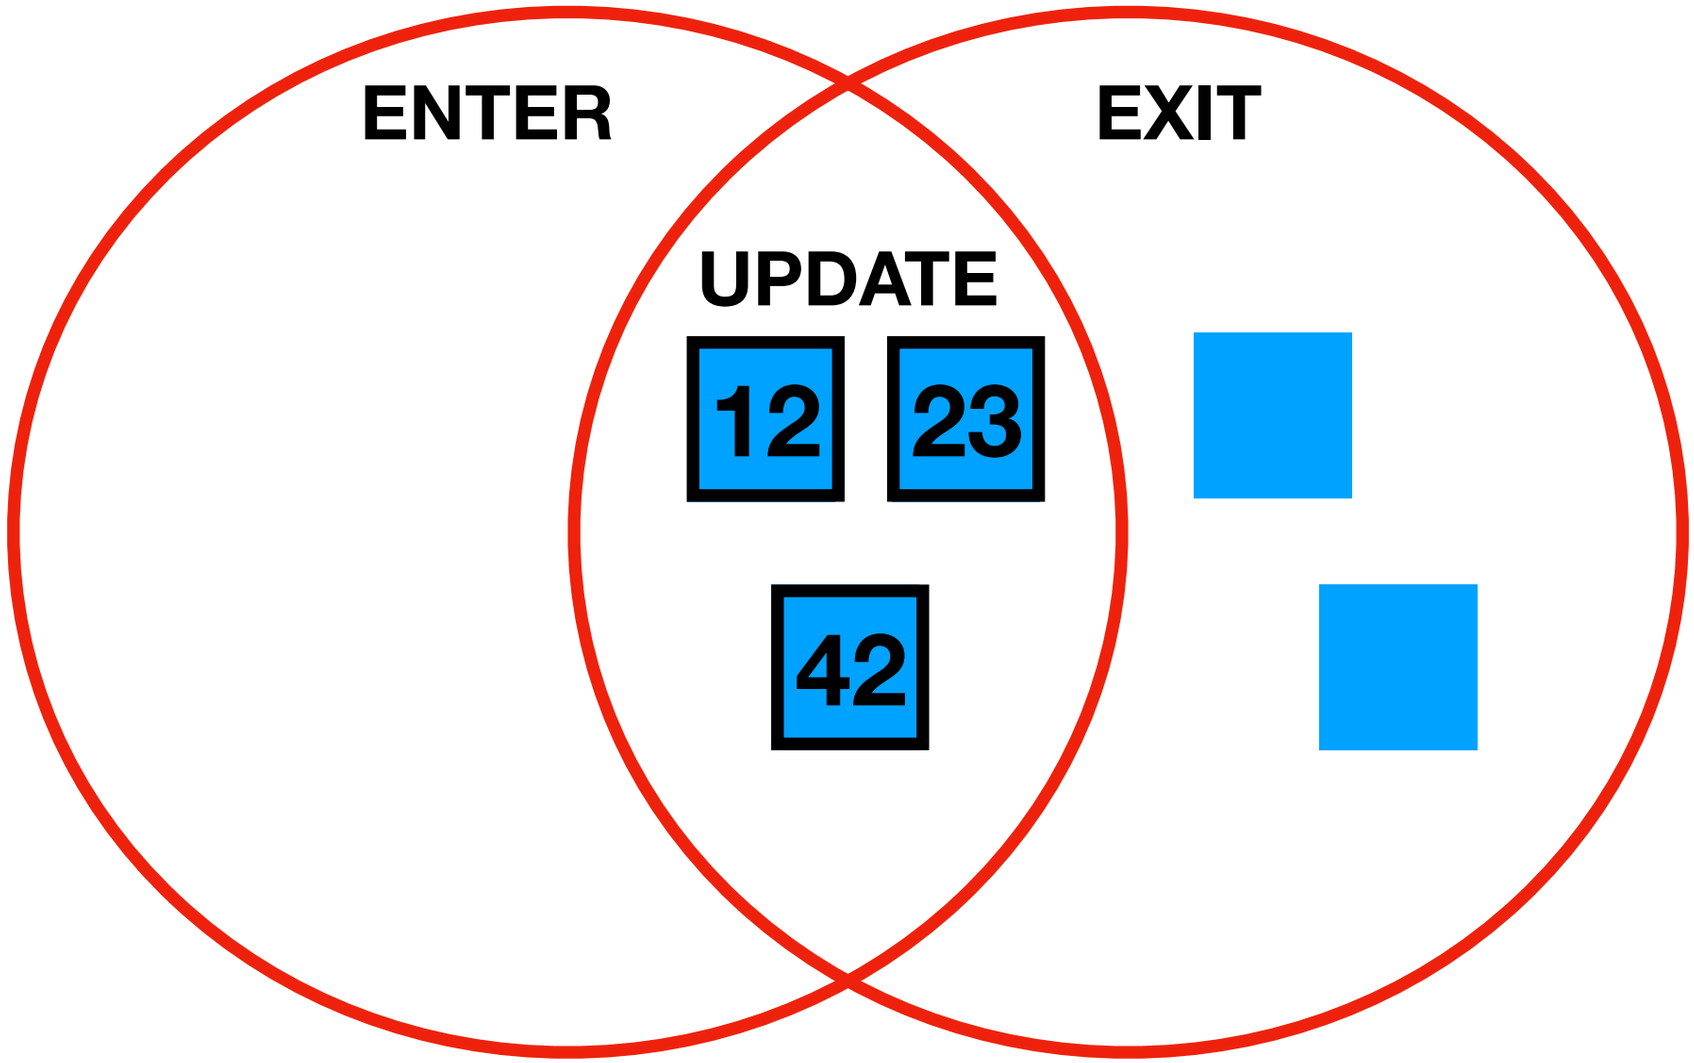
```
◀ ▼ut {_groups: Array(1), _parents: Array(1)}
    ▼ _groups: Array(1)
      ▶ 0: (3) [empty × 3]
        length: 1
```

Extra DOM elements

Scenario 2:
More DOM elements than data



Scenario 2:
More DOM elements than data



Venn Diagram

Update, Enter, Exit selections

```
> svg.selectAll("rect").data([12, 23, 42]);
    ▼ _groups: Array(1)
      ▶ 0: (3) [rect, rect, rect]
```

← Matches

```
> svg.selectAll("rect").data([12, 23, 42]).enter();
    ▼ _groups: Array(1)
      ▶ 0: (3) [empty × 3]
```

← Placeholders

```
> svg.selectAll("rect").data([12, 23, 42]).exit();
    ▼ _groups: Array(1)
      ▶ 0: (5) [empty × 3, rect, rect]
```

← Extra DOM elements

Adding elements

Usually we use the *enter* selection to add DOM elements:

```
var rects = svg.selectAll("rect")
    .data(dataset)
    .enter()
    .append("rect");
```

Removing elements

Usually we use the *exit* selection to remove DOM elements:

```
rects.exit()
     .remove();
```
