

D3 Data Bind

- Update selection
- Enter selection
- Exist selection

D3 Data Bind

- In a data bind, data values are bound to DOM elements
- Every data value becomes part of either the update

Compare data to DOM elements

Data that find matches --> Update selection

**Data that don't find matches --> Enter
selection**

**DOM elements that don't find matches -->
Exit selection**

```
d3.selectAll("rect").data([12, 23, 42, 18, 7])
```

binds data and returns the update selection:

rectangles with 12, 23, 42 bound to them

```
d3.selectAll("rect")  
  .data([12, 23, 42, 18, 7])  
  .enter()
```

**binds data and returns the enter selection:
data values 18 and 7 (missing rectangles)**

```
d3.selectAll("rect")  
  .data([12, 23, 42, 18, 7])  
  .exit()
```

**binds data and returns the exit selection:
nothing in this case**

Adding elements

Usually we use the *enter* selection to add DOM elements:

```
d3.selectAll("rect").data(dataset).enter()  
  .append("rect");
```

Removing elements

Usually we use the *exit* selection to add DOM elements:

```
d3.selectAll("rect").data(dataset).exit()  
  .remove();
```
